

# Introduction to Inventions and Creations

Title of work: car umbrella

Field: protection

Invention inspiration comes with:

It comes from life-I find it inconvenient for us to get on and off the car when it rains, because when it rains, when we open the door, the rain will flow into the car along the open door and make the seat wet. When entering the car There will also be an umbrella action inside. These two actions will take at least ten seconds to complete. If the ground is slippery, it is also possible that the person did not sit in but plunged into it. Such a short ten seconds may be There will be a lot of rain in the car, making the people in the car very uncomfortable, There is a safety problem, improving life-so I thought of adding a diagonal umbrella to the door and door frame.

Production process:

- 1.3D projection of the car model
- 2.Take a rectangular umbrella cloth as an umbrella

3. Take a section of the heating wire of the hair dryer to dry the umbrella.

4. Install a small box and a hook on the top of the car to hook the umbrella.

Works function:

When it rains, we will not fall down because of the rush to get on and off the car, nor will the rain drift into the car and make the car wet.

Advantages of the work:

It is easy to use. we only need to click the button on the door, the door will hook the umbrella and make the umbrella work.

Easy to get materials. just use umbrellas, heating wires and hooks. It is easy to produce and is beneficial to be widely used.
